

PT10/M

PAN AND TILT BRACKET

The ONE SYSTEMS PT10/M is a pan and tilt bracket designed for use with a variety of ONE SYSTEMS sound reinforcement enclosures.

All components of the PT10/M are constructed of high quality 316 stainless steel and durable resin and are suitable for outdoor permanent installation, as well as for indoor applications. The PT10/M may be used in ocean front and marine environments as well as inland direct weather applications.

The ONE SYSTEMS PT10/M provides a “pan and tilt” angle range from vertical (0 degrees) in 10 degrees increments. There are two center pieces supplied and each center piece is capable of 20 degree increments in both pan and tilt axis rotations. The second center piece has its locating “teeth” rotated 10 degrees from the first center piece and may be interchanged to provide the required aiming precision within the 10 degree step resolution.

The PT10/M is designed for use with the 104HTH and 106HTH enclosures. No substitutions are permitted.

It is necessary that the installation and application of all suspended products conform to local and national codes. Installation of the PT10/M should only be attempted by an experienced professional that is familiar with local and national codes and safe suspension practices. The PT10/M installation manual can be found in the documentation section of the One Systems web site. ONE SYSTEMS also requires that the document “Rigging and Suspension of ONE SYSTEMS Products” be read and completely understood. This document is also available at www.ONESYSTEMS.com.
