

# TG MICROPHONE TYPE L

## TG MICROPHONE TYPE L

The Chandler Limited EMI Abbey Road Studios TG Microphone 'Type L' is a solid-state large diaphragm condenser microphone and, as the name implies, the Type L is descended from the innovative TG Microphone.

The TG Microphone Type L inherits the core circuitry, capsule and 'Dual Tone System' of the larger TG Microphone, however, with its own unique voicings.

The Dual Tone System modifies the input stage of the Type L and extends the versatility of the microphone to accommodate a greater array of sources. System 'A' is TG mid forward and harmonically rich, whereas the 'B' voicing takes extreme SPLs and is more pristine.

The TG Microphone Type L is cardioid and intended as a utilitarian recording studio workhorse. The Type L is capable of rivaling scenarios where the C414, FET47, U87, U67 and C12 traditionally have found favor and may replace the practice of employing a dynamic and a ribbon in combination on guitar cabinets.

The TG Microphone Type L is a 48V phantom powered FET microphone that has a larger than solid-state sound.

## TG HISTORY

In 1968 EMI/Abbey Road Studios saw a change from the valve-driven REDD recording and mixing consoles to the transistorized TG12345 desk.

The EMI TG12345 transistor recording console with expanded EQ and, for the first time ever, a compressor/limiter on every channel, would forever leave its sonic imprint on the Beatles' "Abbey Road" and Pink Floyd's "Dark Side of the Moon" albums, as well as recordings by Paul McCartney, John Lennon, and George Harrison.

Conceived in 1967, the TG mixing and mastering consoles would see many revisions throughout the '70s before being retired from service in 1983. TG consoles were built by EMI exclusively for their studios and were never commercially available.

EQUIPMENT

# TG MICROPHONE TYPE L

## SPECIFICATIONS

Microphone Type	Large diaphragm condenser
Transducer Type	Gold, custom spec.
Circuit Type	TG, Solid-state, FET
Dual Tone System	A/B Voicings
Pattern	Cardioid
Pad	-10 dB
Output Impedance	200 Ohms
Power	48V Phantom
Mount	Swivel mount (Included)
Storage	Bamboo box (Included)
