COMPRESSOR

OPTICAL TUBE COMPRESSOR

For the last several decades one compressor design has been the choice of seasoned engineers and producers for recording critical signals such as voice where it is essential to retain all the individual character and emotion while offering a natural, transparent control...the optical tube compressor. Now, Heritage Audio has released its take on this venerable classic, the **TUBESESSOR**.

A unique design with top-of-the-line components, customs transformers at the input and output, and high-quality tubes operating at a very high internal voltage to ensure a clarity, depth and headroom previously unheard of.

The **TUBESESSOR** also has a few tricks up its sleeve... The TUBE SATURATION section allows you to add in a taste of attitude with 4 settings varying from CLASSIC, no saturation at all, to HOT, an angry tone ready for a fight. Heritage Audio has also opted to include its legendary sidechain filter section to expand your options even more.
