

ANM88

Dante™/AES67 networked audio module with 8x8 license for LUNA-U

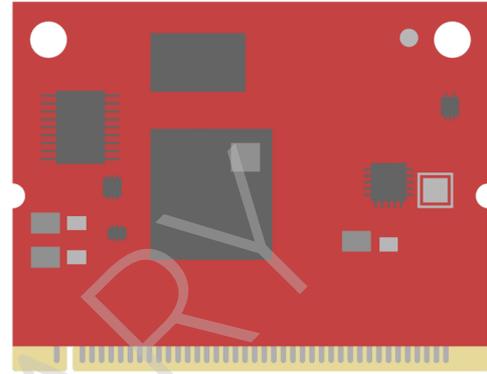

Highlights:

- AudioBridge for Dante™/AES67 audio transfer for all inputs & outputs
- Compatible with all Dante™/AES67 paging/in & output devices
- Fully scalable from medium sized to the largest enterprise solutions

Product information:

The ANM88 is a hardware extension card, adding Dante™/AES67 networked audio channels to a LUNA-U audio matrix processor. It standard features 8x8 networked audio channels (included) and can be expanded with additional software extensions SL-NAC8 for further expansion of the system.

The ANM88 is integrated to the LUNA-U through the top cover hatch, which can be easily removed.

Certification:
